Curriculum Goals

Develop a curriculum revision cycle based on current instructional content, assessment data, instructional needs, and age of materials.

The process provides for a comprehensive evaluation of each content areas, an inclusive development process, a thoughtful and careful implementation, revision based on experience, and time for program effectiveness to be realized. This model will assure that only one major content area is revised or developed in a given year. This has several benefits. The model will facilitate effective and fiscally responsible use of school and parish resources. Budget allocations for supplies and materials, textbooks and staff development can be focused on the successful implementation of the revisions or new program.

Mathematics, the first area of focus has already been determined through teacher input, curriculum mapping, and using online assessment data over the past five years as a comparison to show strengths and potential areas of growth.
